## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-37, drawn to the first special technical feature method of inhibiting addiction-related behavior in a subject suffering from cocaine addiction, comprising administering a therapeutic agent which modulates the level of a polypeptide encoded by an elected gene.

Group II, claim(s) 38-89, drawn to the second technical feature method for identifying an agent that has the ability to prevent or inhibit cocaine addiction-related behavior, wherein the agent binds to or modulates the activity of a protein encoded by an elected gene.

Furthermore, in addition to the election of one of the above-mentioned groups, for Applicant to be fully responsive to the restriction requirement, Applicant must elect one gene identified in Tables 1-15 to which the claims will be restricted.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking groups I-II appears to be that they all relate to inhibiting cocaine addiction-related behavior. However, Soyka & De Vry (*Eur Neuropsychopharmacology*, 2000, **10**: 325-332) teaches the use of an agent, flupenthixol, a neuroleptic drug with dopamine D1 and D2 receptor antagonist

properties, as being useful in decreasing cocaine consumption. Therefore, the technical feature linking the inventions of groups I-II does not contribute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art. Furthermore, the genes listed in Tables 1-15 are known in the art and therefore do not define a contribution over the prior art.

The special technical feature of Group I is considered to be a method of inhibiting addiction-related behavior in a subject, which is not required by the invention of Group II. Accordingly, Groups I-II are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). In order to be fully responsive, Applicant is required to elect a single group from designated groups I-II and a single molecular embodiment (a gene identified in Tables 1-15) as set forth above to which the claims will be restricted, even though the requirement is traversed. Applicant is advised that neither I-II nor the single molecular embodiment (gene) are species election requirements. The subject matter for examination will be restricted to the extent of the subject matter of the elected groups.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1649

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
